This project is the final project of 'HTML / CSS Developer (Front End Developer) Trainee' course from LMS Trainee Program of AxonCore Technologies. I have completed 'HTML / CSS Developer (Front End Developer) Trainee' course from LMS Trainee Program of AxonCore Technologies ; with this project submission.

This project is about creating the front-end of a website of Aura company, a fictional company selling quality headphones online. The front-end of the website looks modern and stylish. I have also added an extra checkout webpage where the buyer is needed to provide his / her contact information, shipping address, debit / credit card details (as payment information) to buy headphone.

I learnt how to build stylish and attractive front-end of any website using HTML, CSS from this course. I also learnt how to build my custom website and publish it worldwide using GitHub pages.

I did not face any problems while learning from this course. I did not face any challenges while doing this project.
